Naxtre
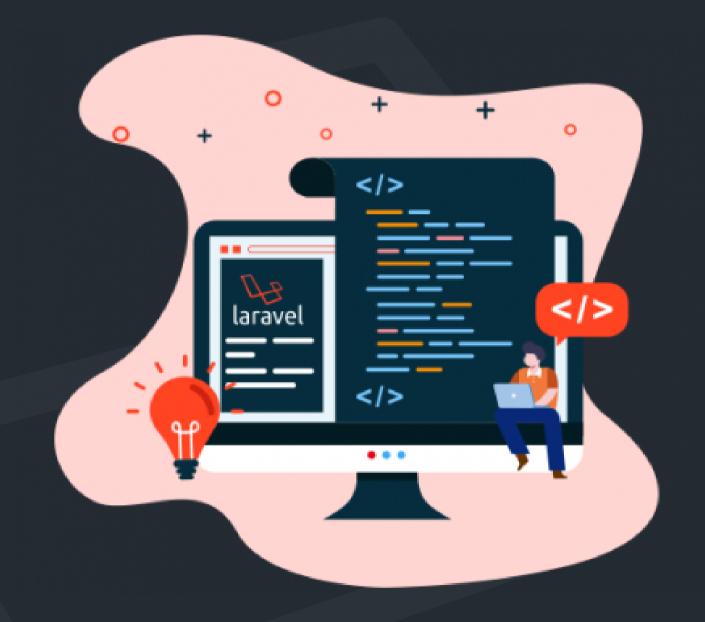

Laravel 8.0 Features

Laravel Jetstream

Jetstream includes login, registration, email verification, two-factor authentication, session management, API support via Laravel Sanctum, and optional team management.

Models Directory

By overwhelming community demand, the default Laravel application skeleton not contains an app/Models directory. We hope you enjoy this new home for your Eloquent models!

Naxtre

Models Factory Classes

Eloquent model factories have been entirely re-written as class-based factories and improved to have first-class relationship support.

Migration Squashing

Now, when you attempt to migrate your database and no other migrations have been executed, Laravel will execute the schema file's SQL statements first.

Routing Namespace Updates

Laravel 8.x applications,
controller route definitions
should be defined using standard
PHP callable syntax:

App\Http\Controllers\UserController;
Route::get('/users', [UserController::class,'index']);

Naxtre

Dynamic blade Components

Sometimes you may need to render a component but not know which component should be rendered until runtime.
