

## What Are The Added Advantages Of A VPN Extension?

Whether you want to unlock blocked websites or improve your digital safety, you need a VPN extension. It is available for free and it has many advantages other than unlocking sites and improving data safety.

A [VPN extension](#) can help, if you want to unlock blocked websites. And it is available for free. You simply need to download the extension on your laptop and add it to your browser. Every time you want to open a site, you can enter its address in the VPN.

How does a Virtual Private Network work?

Your local government has blocked some sites due to policy issues. But those websites are available in other countries. In other words, people residing in other countries could have easy access to those sites. Also, it can be said that if you access those sites from other countries, you can also access those sites. It is what Virtual Private Network does for its users.

A **VPN add-on** will become your browser. You will enter the address of the site you want to access; it will re-route your IP address to the country where that site is working. In this way, a Virtual Private Network will make you a local user. Your connection will become local for that site and your ISP company won't be able to locate or even recognize your IP address.

The VPN will hide your identity. It is called masking where your IP address will be changed by re-routing. And it is 100% legal. You won't access the blocked sites from your home network. The Virtual Private Network will make you a local and, in this way, bypass the law of your country. When you want to exit, the private network will again connect to your home network.

[Is Hola VPN safe?](#) If this question is in your mind, then you should shed all your worries. It is 100% safe as it won't interfere with your laptop functions. For example, it won't drain the laptop battery. Also, it won't ask for making changes in the settings. It will simply sit as a download on the laptop.

Another advantage of Hola is it is available for free. In other words, you won't have to pay anything for using the Virtual Private Network. It is better to use a Virtual Private Network before making an opinion on it. In this way, you can understand VPN advantages.

Another advantage of using a **VPN extension** is that it can keep you safe from cybercriminals. It will mask your identity so no one can track your IP address and try checking your browsing history.
